

## UV Highlighter Designs

Highlighters can be drawn on glass while leaving little to no trace to our human eyes, but to the birds they see the marks left behind. This method will warn birds not to fly through while keeping a clear view of nature that we can enjoy!

### Materials:

- Highlighters
- A positive attitude

Take your highlighters and draw on the outside of your window. Make sure to draw all along the window and try not to have any spaces bigger than 2x4inches or 5-10cm. This will ensure that no birds will try to squeeze between the lines.

In this picture we can see the lines drawn with highlighters under a UV light. Without this UV light we cannot see the lines, but birds can.
