

## Window Safe Dish Soap Based Paint

This activity is for fun kids to paint on windows, without parents worrying about whether it will come off. Any sort of pattern can be made, keeping in mind for bird prevention, to have spacing less than 10 cm apart in any images, otherwise the birds may attempt to “fly through” the space in the paint.

- Mix one part acrylic paint and one part dish soap
- Stir together, and paint away!
- This paint can be applied on the inside or outside of windows, and can easily be wiped away with a damp dish towel
- Paint applied on the outside of the window may come off in the rain
